

Locus — Outreach Email Template

Date: 2026-06-24 **Use:** cold/warm outreach to lab PIs. Fill in every [bracketed] field. ~130 words — fits on one screen so a professor can read it and reply yes/no in seconds.

Subject line

A private, on-device data assistant for the [PROF LAST NAME] Lab

A/B alternatives:

- Analyze your lab's data in plain English — without it leaving your computer
 - A free, private AI data tool for the [PROF LAST NAME] Lab
-

Email body

Dear Professor [PROF LAST NAME],

I'm [YOUR NAME], [YOUR ROLE] at [TEAM/COMPANY NAME], reaching out via [MUTUAL CONNECTION] / — I came across your work on [SPECIFIC RESEARCH AREA]]. We're building **Locus**, and I think it could save your lab real time.

Locus is a **desktop app that lets your team analyze data just by asking** — questions, charts, and statistics in plain English — with an AI assistant that runs **entirely on your own computer**. Your data never leaves the machine and nothing goes to the cloud, so it works with [SPECIFIC DATA TYPE] without privacy or IP concerns. It's built for lab members who live in Excel, not for programmers.

Given your lab's work with [SPECIFIC DATA TYPE / WORKFLOW], I'd love to give you **free early access** and get your feedback.

Would a quick **15-minute call** in the next week or two be worth it? If not, no worries at all — just reply "not now."

Best, [YOUR NAME] [YOUR ROLE], [TEAM/COMPANY NAME] [YOUR EMAIL] · [optional: scheduling link / website]

The one line to personalize — [SPECIFIC DATA TYPE]

Swap this single phrase per lab (this is what turns a cold email into a reply):

Lab	[SPECIFIC DATA TYPE]
McLaughlin	clinical metabolic and body-composition data
Engleman / Farber / Han	flow-cytometry and immune-profiling data from patient samples
Welm / Olive	drug-response data from patient-derived models
Crew	clinical-trial and patient outcome data
Buckley	assay data from patient blood and marrow samples
Gordts	metabolic phenotyping data
Häcker	assay and screening data from drug-development work

Tips

- **Personalize only that one sentence.** It's the difference between a reply and the trash — pull it from the target-labs sheet's "Why it fits" column.
- **Keep it to one screen.** Resist adding a second paragraph about features; the goal is a yes/no, not a full pitch.
- **Make the ask tiny.** "15-minute call" + an explicit easy out ("just reply 'not now'") lowers the cost of replying.
- **Use a warm intro when you have one** — put it in the first sentence ([MUTUAL CONNECTION]).
